Reincarnation or Transmigration of the Soul is REAL as consciousness is contained in the UNIVERSE after death

REINCARNATION is possible as consciousness is simply energy which is contained in our bodies and is released after death and can find a new host, according to an astonishing theory.

By SEAN MARTIN  Dr Jim Tucker spent 15 years interviewing young children who came to have been reincarnated.

For his book, Life After Life: A Scientific Investigation of Children's Memories of Previous Lives, Dr Tucker interviewed 2,500 youngsters who show signs that they have been reincarnated – such as having memories that they had never experienced or having scars or birthmarks identical to the person that they have supposedly been reincarnated from. The psychiatrist from the University of Virginia says that reincarnation is possible thanks to consciousness being energy on a quantum, sub atomic level which is simply contained in our bodies, and not a part of them. Exactly what consciousness remains a mystery to scientists, with researchers struggling to pin down exactly what it is.
